

# Aduanapp Classify

26/02/2025

## Value Proposition

### Introduction

Aduanapp is a technology company focused on customs. Our classifier is an intelligent assistance tool that simplifies the preliminary identification of tariff classifications, providing an initial guide in the classification process through AI technology. Our system serves as a consultative support, complementing — rather than replacing — the expertise of customs brokers

### Key Benefits

#### For Importers/Exporters

- Facilitates preliminary research of tariff classifications (including Mexico's NICO & USA's HTS code)
- Enables better initial planning (assessing the feasibility of importation)
- Enhances communication experience with the customs agency

- Provides an initial overview of requirements and regulations
- Optimizes pre-clearance preparation time
- Easy to use and available 24/7

### **For Custom Agencies**

- Streamlines the sales process
- Support tool for initial analysis
- Customization of risk rules based on needs
- Access to legal foundations for reference
- Enhances operational efficiency
- Bilingual service for international operations

### **For Government**

- Democratizes access to tariff classification for new importers and exporters.
- Improves product traceability by providing a structured and accessible database.
- Facilitates the promotion of exports under the "Made in Mexico" label, boosting international trade.
- Optimizes tax oversight and collection by enhancing transparency in classification.
- Can be integrated as a support tool in trade facilitation programs.
- User-friendly digital platform, available 24/7 for consultation and validation.

## **Differentiators**

### **1. Adaptive Intelligence**

- Flexibility for input via image or text
- Natural language processing capability (multiple-choice questions or free input)

### **2. Advanced Personalization**

- Adaptable risk rules
- Customizable to the specific policies of each customs broker
- Constant updates based on new regulations

### **3. Integrated Documentation**

- References to national regulations
- Inclusion of explanatory notes, national notes, and general rules
- Estimated taxes (IGI, IGE, IEPS, VAT)

# Final Result

Through the use of artificial intelligence, users receive valuable initial guidance on tariff classifications, serving as a starting point for professional consultations with customs brokers. This facilitates more informed decision-making and better preparation for the formal classification and customs clearance process.

## Classification Via AI Technology

# Prices

Our pricing is flexible and highly competitive. We offer subscription plans and revenue-sharing options for strategic partners.
